Pipet Tips

These tips use a special blend of polypropylene together with a custom mold finish to achieve their low retention quality. We do not add any potentially bioactive processing additives such as slip agents or antistatic agents in the production of these tips. All of our low retention tips are certified free of detectable RNase, DNase and pyrogens.

A, B. 50 mm. 1-200µL tips come in two color choices and a variety of packaging options.

Serological Pipets

These one-piece, seamless pipets contain no weld points that may trap liquid. This unique design provides faster fill and release rates, ensures a complete flow out of the sample and offers a higher degree of accuracy. The pipets are supplied with an aerosol barrier plug that prevents both liquid and aerosols from contaminating the pipetter.

Printed black graduation marks prevent ambiguity and guarantee precise reading. There are reverse and negative graduations. The pipets are color coded using the ASTM E1380 industry standards and are calibrated to deliver (TD), per ASTM E934.

Transfer Pipets

Produced from a custom grade of low-density polyethylene (LDPE), these unbreakable one-piece pipets are ideal to draw and dispense liquids in controlled, reproducible drop sizes. The pipets can be heat sealed to use for liquid storage or transport. They are packaged in convenient dispenser boxes that fit easily on crowded lab benches. They are available in a variety of lengths and tip styles.
